Managers at or near the upper levels of the organization structure who are responsible for making organization wide decisions and establishing the goals and plans that affect the entire organization.

Efficiency
(Means)

Resource Usage

Low Waste

Effectiveness
(Ends)

Goal Attainment

High Attainment

Management strives for:
Low resource waste (High Efficiency)
High Goal Attainment (High Effectiveness)

Definitions:

- **According to Harold Koontz** Management is the art of getting things done through and with formally organized groups”.
- **According to Peter F. Drucker.** “A Multipurpose organ that manages a business and manages managers and manages workers and works”.
- **According to J.Lundy** “Management is what management does. It is the task of planning executing and controlling”.
- **According to Lawrence Appley** “Management is the development of people and not the direction of things”.
- **According to F.W. Tylor** “Management is the art of knowing what you want to do in the best and cheapest way”.

Meaning of Management

Fig 1.1

Fig 1.2

- In nut shell it can be said that management as such is a science of managing men, machines, money materials and methods. It embraces all duties and functions that pertains to the initiation of an enterprise, its financing, the establishment of all major policies the provisions of all necessary equipment, the entailing of general form of organization, under which enterprise is to operate and the selection of the principal officers.

Characteristics of Management:

- **Management is a group activity:**

It is a group activity. Nobody can satisfy all his desires himself. Therefore he unites with his fellow-beings and works in an organized group to achieve what he cannot achieve individually. Massie has rightly called management as a “Co-operative group”.

- **Management is Goal-oriented:**

According to **Theo Haiman** “Effective management is always management by objectives.” Group efforts are directed towards the achievements of some predetermined goals. Management is concerned with establishment and accomplishment of these objectives.

- **Management is a factor of Production:**

Management is not an end in itself. It is a means to achieve the group objectives. It is a factor of production that is required to co-ordinate with the other factors of production for the accomplishment of predetermined goals and objectives.

- **It is a Universal Character:**

Management is essential in all types of concerns. It somewhere there is some human activity, management is must there. The basic principles of management are universal. These can be applied in all types of concerns i.e. business, social, religious, cultural, sports, educational a International technology.

- **Management is needed at all levels of the enterprise:**

On the basis of the nature of work or target and the scope of authority, management is needed at all levels of the organizations e.g., top level, middle level and supervisor level.

- **It is a distinct function:**

Management is a distinct function performed to fix and achieve stated objectives by the use of manpower and other factors of production. Different from the activities, techniques and procedures, the process of management consists of such functions as planning, organizing, staffing, directing, coordinating, motivating and controlling.

It is a Social Process:

Management is taken as a social process. It has a social responsibility to make reasonable use of scarce resources keeping in view the benefit of the community as a whole.

System of Authority:

Authority is the power to compel men to work in a specific manner.

Management cannot work in the absence of authority. There is a chain of authority and responsibility among people working at different levels of the organization. There cannot be an efficient management without well defined lines of command and a superior subordinate relationship at the every levels of decision making.

Management as a System

- **It is a dynamic function:**

Management has to be performed continuously, in a rapidly every changing business environment. It is constantly engaged in the molding of the enterprise. It is also concerned about the change of environment itself so as to ensure the success of enterprise. Hence it is on-going function.

- **Management is Intangible:**

It can be seen in the form of results and could not be actually seen. For example: when we are not able to produce desired quantity, we say it is the result of poor management.

- **It is Art as well as Science:**

Management is a science since its principles have universal application.

Management is an art as the results of management depends upon the personal skill of managers. The art of the manager is essential to make the best use of management science. Thus management is both science and art.

- **It is a Profession:**

It has systematic and specialized body of knowledge consisting of principles, techniques, rules and laws. It can be taught as a specialized subject.

WHAT DO MANAGERS DO?

- Management researchers have developed three approaches to describe what managers do: functions, roles, and skills.

MANAGEMENT FUNCTIONS

Consider figure 1.4 from our textbook. Four major functions of management are promoted as important for modern day management.

Figure 1.4 Four functions of management (source: Robbins, Bergman and Coulter, 2018).

Management Functions

- According to the functions approach, managers perform certain activities or functions as they efficiently and effectively coordinate the work of others.
- Henry Fayol, French businessman in early of 20th century first introduced five management functions: planning, organizing, commanding, coordinating, and controlling.
- Today, these functions have been condensed to four: planning, organizing, leading, and controlling. Let's briefly look at each function.

Management Functions

1. **Planning:** Defining company goals, establishing strategies and developing plans to achieve those goals.
2. **Organizing:** Arranging and organizing things to accomplish organizational goals. Determine what task are to be done, who is to do them and how it will be done.
3. **Leading:** Manager with others to lead them toward organizational goals. Motivate and lead the employees and restore conflicts.
4. **Controlling:** Monitoring activities to ensure that employees are working properly so organizational goals can be accomplished as planned.

- If you have no particular destination in mind, then any road will suffice. However, if you have someplace in particular you want to go, you need to plan the best way to get there. Because an organization exists to achieve some particular purpose, some one must define that purpose and the means for its achievement.
- Management is that someone. As managers engage in planning, they define goals, establish strategies for achieving those goals, and develop plans to integrate and coordinate activities.
- Managers are also responsible for arranging and structuring work to accomplish the organization's goals.
- We call this function organizing. When managers organize. They determine what tasks are to be done, who is to do them, how the tasks are to be grouped, who reports to whom, and where decisions are to be made.

- Every organization has people, and a manager's job is to work with and through people to accomplish goals. This is the leading function.
- When managers motivate subordinates, help resolve work group conflicts, influence individuals or teams as they work, select the most effective communication channel, or deal in any way with employee behavior issues, they are leading.
- The final management function is controlling. After goals and plans are set (planning), tasks and structural arrangements are put in place (organizing), and people are hired, trained, and motivated (leading), there has to be some evaluation of whether things are going as planned.
- To ensure that goals are being met and that work is being done as it should be, managers must monitor and evaluate performance. Actual performance must be compared with the set goals.

- If those goals aren't being achieved, it's management's job to get work back on track. This process of monitoring, comparing, and correcting is the controlling function.
